Description

Radiography is a proven and useful procedure for evaluation of the bones, joints, and soft tissues, to establish the presence, absence, and/or nature of disease. These procedures should be performed for valid medical reasons, using the minimum amount of radiation necessary to obtain a quality examination.

Comparison films (i.e., x-rays, ultrasounds, etc.) are usually minimal views of contralateral (bilateral) bones, joints, or soft tissue, that are used to verify or exclude specific pathology of the symptomatic bone, joint, or soft tissue.

Commercial Plan Policy

SelectHealth **will not reimburse for any comparison film(s) (e.g., bilateral) regardless of diagnosis, modifier, and/or separate interpretation and report. These will be denied as inclusive to the medically necessary procedure.**

In addition, no reimbursement will be made for a comparison film when it is done as part of an internal protocol (e.g., when the patient presents for an E/M service) or any research project. This type of film will be considered an essential part of the medical decision-making component of an evaluation and management E/M service. As such, the documentation should include the visualization and interpretation of the comparison image(s).

SelectHealth Advantage (Medicare/CMS)

SelectHealth Advantage **will follow the commercial plan policy.**

SelectHealth Community Care (Medicaid)

SelectHealth Community Care **will follow the commercial plan policy.**
